BRUNEL ASSISTIVE EQUIPMENT MEASUREMENT GUIDANCE RESEARCH STUDY

You are invited to participate in a research exploring the perceptions of older adults on the usability of the Brunel Measurement guidance in self-assessing for minor adaptive equipment.

Brunel University London has developed national guidance, which is available online at: <http://www.dlf.org.uk/external/asksara/authority/brunel/measurement.pdf> for measuring the home environment to enable the successful fit of minor adaptive equipment.

Who are we looking for:

older adults (age 65 years and older) who live at home
who are experiencing at present / or who have previously experienced difficulty with transfers (*e.g. getting on and off the toilet, in and out of bath or on/off the bed, on/off the chair, and up and down the stairs*)
and are in need of / or already use or have used minor adaptive equipment in their home.

We want you to use the Brunel guidance for measuring your home environment and tell us about **YOUR** experience!!!

The research is conducted by MSc. Occupational Therapy student at Brunel University and has been approved by the College of Health and Life Sciences ethics committee.

**If you would like more information about participating in this study,
please contact the researcher , Jacinta Dempsey via e-mail at: 1602419@brunel.ac.uk**
